

# Fast2Test

## Pass Your Next Certification Exam Fast!

Everything you need to prepare, learn & pass your certification exam easily.

365 days free updates. First attempt guaranteed success.

### Instant Download

After Payment, our system will send you the products you purchase in mailbox in a minute after payment. If not received within 2 hours, please contact us.

### 365 Days Free Updates

Free update is available within 365 days after your purchase. After 365 days, you will get 50% discounts for updating.

### Money Back Guarantee

Full refund if you fail the corresponding exam in 60 days after purchasing. And Free get any another product.

### Security & Privacy

We respect customer privacy. We use McAfee's security service to provide you with utmost security for your personal information & peace of mind.

We're not the only ones **happy** about Fast2test Practice Materials ...

**62316+** customers in 100+ countries use Fast2test Self Test Engine. Meet our customers.

**Exam** : **MCPA-Level-1**

**Title** : MuleSoft Certified Platform Architect - Level 1

**Vendor** : MuleSoft

**Version** : DEMO

**NO.1** What is the most performant out-of-the-box solution in Anypoint Platform to track transaction state in an asynchronously executing long-running process implemented as a Mule application deployed to multiple CloudHub workers?

- A. Persistent Object Store
- B. File-based storage
- C. java.util.WeakHashMap
- D. Redis distributed cache

**Answer:** A

**NO.2** What is true about API implementations when dealing with legal regulations that require all data processing to be performed within a certain jurisdiction (such as in the USA or the EU)?

- A. They must ensure ALL data is encrypted both in transit and at rest
- B. They must be deployed to Anypoint Platform runtime planes that are managed by Anypoint Platform control planes, with both planes in the same Jurisdiction
- C. They must use a Jurisdiction-local external messaging system such as Active MQ rather than Anypoint MQ
- D. They must avoid using the Object Store as it depends on services deployed ONLY to the US East region

**Answer:** B

**NO.3** What is a best practice when building System APIs?

- A. Expose to API clients all technical details of the API implementation's interaction with the backend system
- B. Model all API resources and methods to closely mimic the operations of the backend system
- C. Build an Enterprise Data Model (Canonical Data Model) for each backend system and apply it to System APIs
- D. Document the API using an easily consumable asset like a RAML definition

**Answer:** D

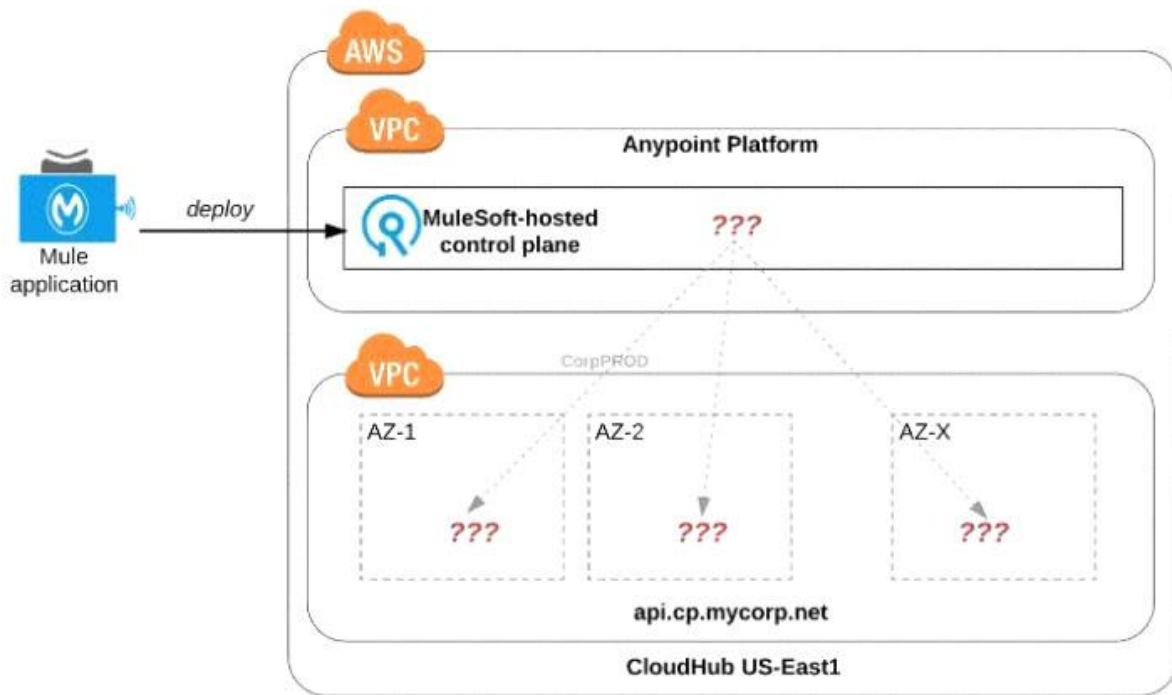

**NO.4** An API implementation is deployed to CloudHub.

What conditions can be alerted on using the default Anypoint Platform functionality, where the alert conditions depend on the end-to-end request processing of the API implementation?

- A. When a particular API client invokes the API too often within a given time period
- B. When the API is invoked by an unrecognized API client
- C. When the response time of API invocations exceeds a threshold
- D. When the API receives a very high number of API invocations

**Answer:** C

**NO.5** Refer to the exhibit.

An organization uses one specific CloudHub (AWS) region for all CloudHub deployments. How are CloudHub workers assigned to availability zones (AZs) when the organization's Mule applications are deployed to CloudHub in that region?

- A.** An AZ is randomly selected for a Mule application, and all the Mule application's CloudHub workers are assigned to that one AZ
- B.** Workers belonging to a given environment are assigned to the same AZ within that region
- C.** Workers are randomly distributed across available AZs within that region
- D.** AZs are selected as part of the Mule application's deployment configuration

**Answer:** A
